

Tips for Staff

Communicate frequently with all staff to keep them informed on the expectations for prevention steps everyone can take to protect residents, at work and at home.

Review with staff potential situations that could interrupt their work schedule, like closed schools, daycare, illness of family or themselves, and help them plan their steps.

Use and share the tools like these CDC [infographics](#) and [print resources](#) for sharing information quickly and help staff to take actions to protect themselves and others from COVID-19.

Maximize your front line defenses by having screening questions for visitors and staff before they are in contact with residents, for contact with international travelers, and any out of country travel they may take.
