Understanding Your CMS Claims Data – Methods for Optimizing Medicare MDS Accuracy and Reimbursement | Broad River Rehab

Virginia Annual Payment and Financial Issues Conference

1

Speakers

Joe Eaton – Chief Strategist

Joe Eaton is Broad River Rehab's Chief Strategist. With a passion for problem-solving, he takes great satisfaction in simplifying the complex and creating tools to make complex issues easier to understand. He comes to BRR with 20 years of experience in engineering and business and has written numerous software systems and tools for the healthcare industry from nursing to therapy. Joe specializes in the development of Artificial Intelligence tools (AI) that greatly simplify accuracy and compliance. He takes pride in providing clients with actionable data analytics and is always looking for a challenging new problem to solve.

Renee Kinder – Executive Vice President of Clinical Services

Renee Kinder, MS, CCC-SLP, RAC-CT, is Broad River Rehab's Executive Vice President of Clinical Services. She authors McKnight's Long Term Care News "Rehab Realities", serves as Gerontology Professional Development Manager for the American Speech Language Hearing Association's (ASHA) gerontology special interest group, is a member of the University of Kentucky College of Medicine community faculty, and is an advisor to the American Medical Association's Relative Value Health Care Professionals Advisory Committee (HCPAC).

Course Overview

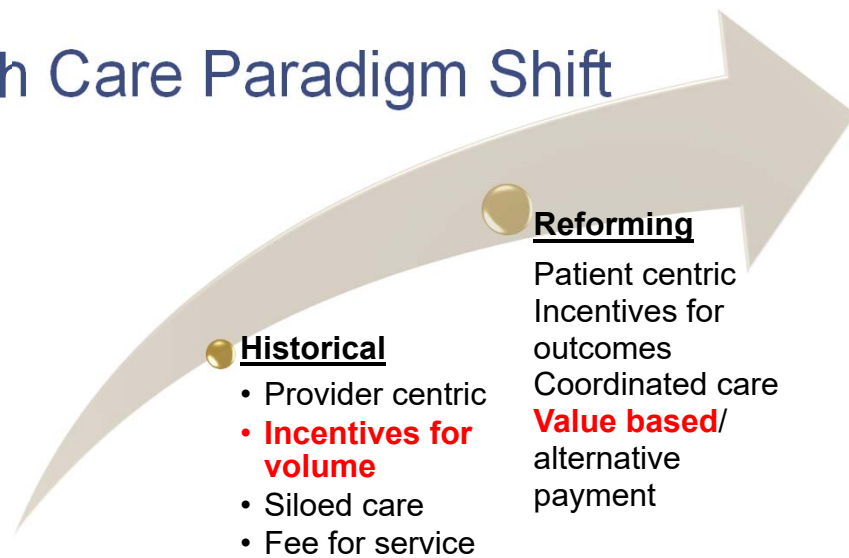

Understanding Your CMS Claims Data – Methods for Optimizing Medicare MDS Accuracy and Reimbursement | Broad River Rehab

This course will assist the IDT with being able to describe 2019-2022 PDPM data trends from the CMS Research Data Assistance Center (ResDAC) for Virginia as a state, each individual provider/group of homes, and across the nation. Furthermore, speakers will provide guidance on defining key clinical data elements and MDS coding practices related to NTA, Nursing and Rehab in conjunction with immediate impact on reimbursement and financial impacts for communities and explore dynamics of care in the post-acute (PAC) world including clinical decision-making, methods to maintain quality of life and choice based on one's understanding of how their data trends internally.

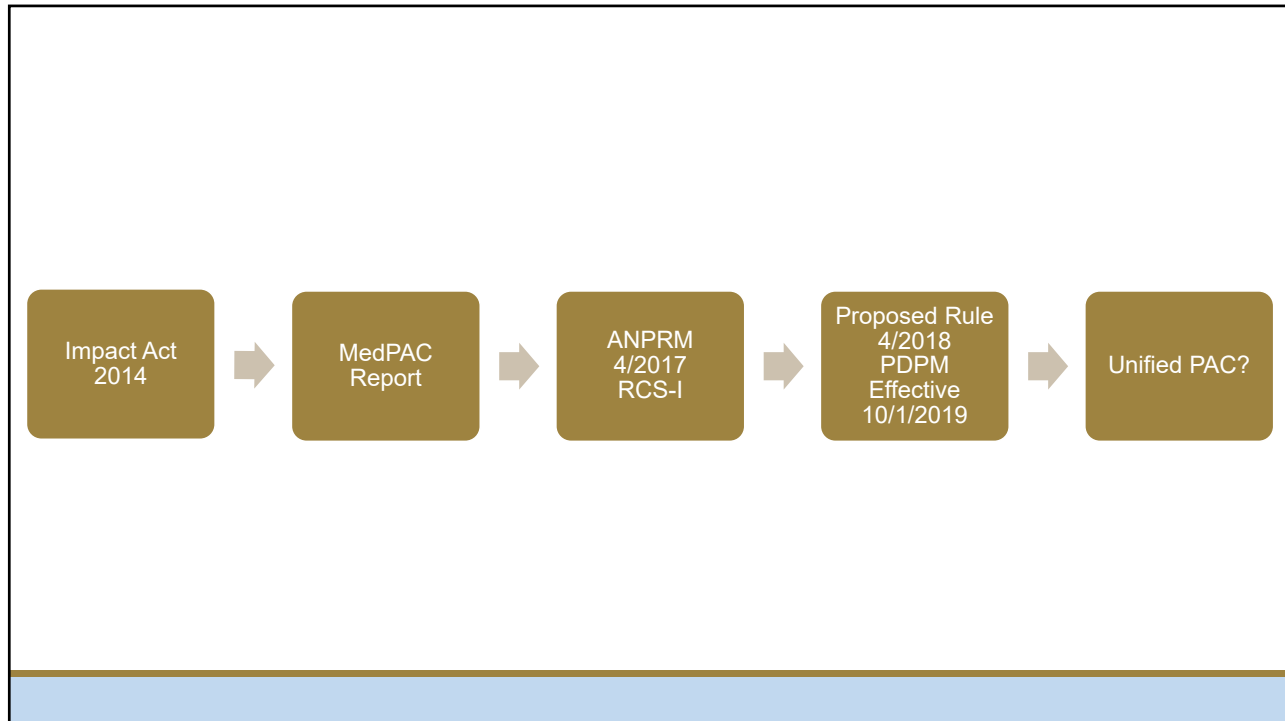

3

3

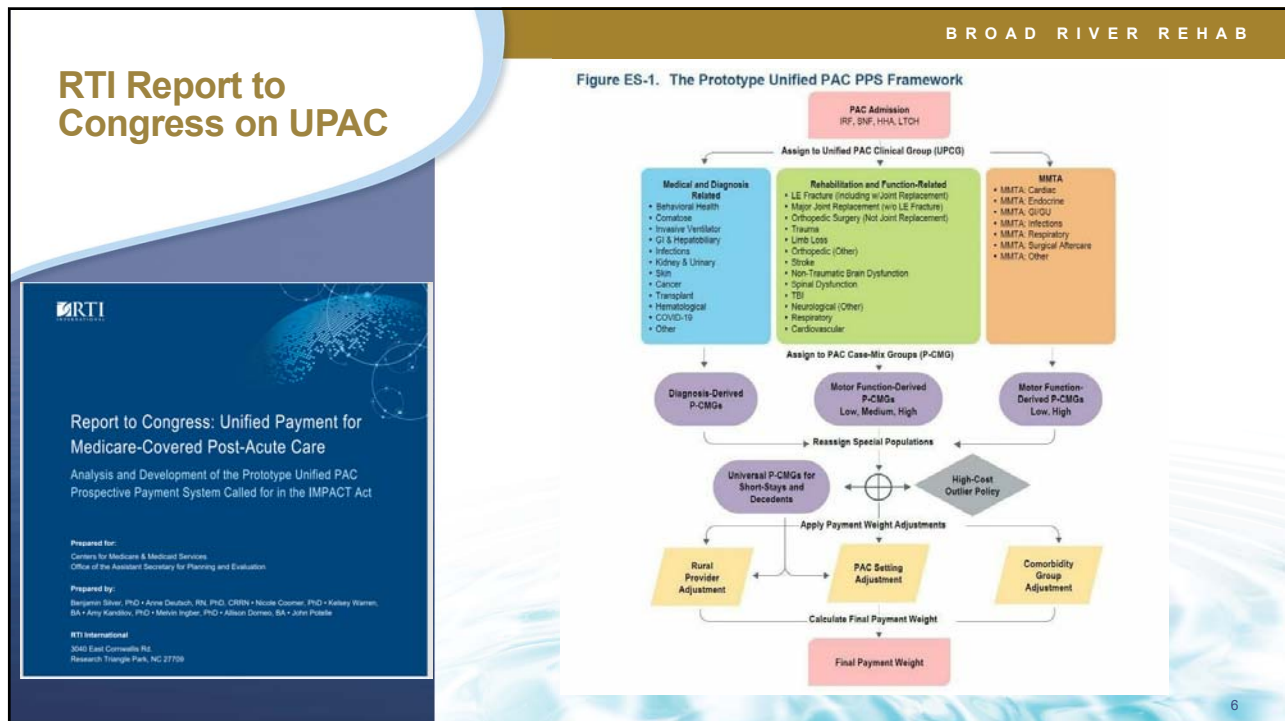

Health Care Paradigm Shift

4

5

6

CMS Quality Strategy

7

Challenges in Prior Payment Models

- For skilled nursing facilities and home health agencies, payment was currently driven by the amount and types of services provided (e.g. therapy services)
- Prior prospective payment systems (PPS) don't fit into the new payment environment of value over volume
 - Unified PAC PPS across home health, SNF, IRF, and LTCH
 - Alternative Payment Models (APMs)

8

8

Data Findings in Prior Payment Systems

- Numerous government findings of fraud and abuse by OIG and DOJ
- MedPAC Reports

CMS Findings: SNF

“The two most notable trends... were that the percentage of residents classifying into the Ultra-High therapy category has increased steadily and, of greater concern, that the percentage of residents receiving just enough therapy to surpass the Ultra-High and Very-High therapy thresholds has also increased. {Specifically} “the percentage of claims-matched MDS assessments in the range of 720 minutes to 739 minutes, which is just enough to surpass the 720- minute threshold for RU groups, has increased from 5 percent in FY 2005 to 33 percent in FY 2013” and this trend has continued since that time.”

9

9

PDPM: Major Features

- Group & concurrent therapy limitation
- Need for an accountability mechanism to ensure therapy is delivered when a therapy payment is made
- Revised assessment schedules
- Variable per diem rates for PT, OT, and non-therapy ancillary services; consistent payment across the episode for SLP and Nursing services
- Clinical conditions and comorbidities drive payment

10

10

Goals of PDPM

- Based heavily on data analytics
- Derives payment from verifiable patient characteristics.
- Remove service-based metrics (e.g. therapy minutes) as determinant of payment
- Decrease administrative burden
- Reduce the complexity (number of component levels) compared to what was proposed in RCS-1

11

11

Under PDPM Skilled Nursing Facility Level of Care Definition Did Not Change

Care in a SNF is covered if all of the following four factors are met:

- The patient requires skilled nursing services or skilled rehabilitation services, i.e., services that must be performed by or under the supervision of professional or technical personnel (see §§30.2 - 30.4); are ordered by a physician and the services are rendered for a condition for which the patient received inpatient hospital services or for a condition that arose while receiving care in a SNF for a condition for which he received inpatient hospital services;
- The patient requires these skilled services on a daily basis (see §30.6); and
- As a practical matter, considering economy and efficiency, the daily skilled services can be provided only on an inpatient basis in a SNF. (See §30.7.)
- The services delivered are reasonable and necessary for the treatment of a patient's illness or injury, i.e., are consistent with the nature and severity of the individual's illness or injury, the individual's particular medical needs, and accepted standards of medical practice. The services must also be reasonable in terms of duration and quantity.

12

12

Under PDPM Quality and Survey Expectations Did Not Change

- New Survey Process secondary to Phase II Requirements of Participation went into effect 11.28.2017
- Short and Long Stay Quality Measures are still in place
- Quality Reporting Program
- Value Based Purchasing
- 5 Star Rating System

13

13

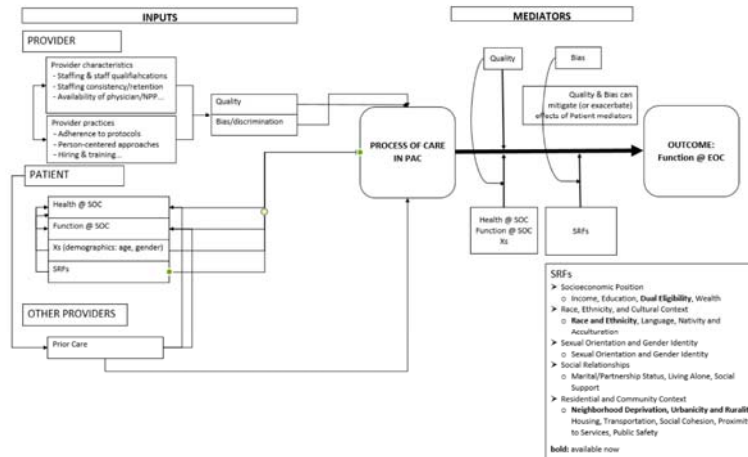

What about outcomes? Technical Expert Panel (TEP) for Cross-Setting Function Measure Development

- Under this project, the PAC QRP Support team supports CMS in the development and maintenance of quality measures for use in the IRF, LTCH, SNF, and HH QRPs and the Nursing Home Quality Initiative (NHQI).
- These measures are designed to improve care quality and to enable Medicare beneficiaries to make informed choices when selecting a healthcare provider.
- The suite of PAC QRP measures covers several domains relevant to care quality, including function – a dimension of care that is especially salient to each of the PAC settings.
- Over the last decade, CMS has introduced several measures addressing function.
- To ensure these and any newly developed function measures meet CMS program requirements and goals while maintaining high levels of scientific acceptability, the PAC QRP Support team convened a Technical Expert Panel (TEP). The PAC QRP Support team sought guidance on specifications for a cross-setting functional outcome measure to implement across PAC QRPs.

14

14

Figure 1. Conceptual Model for Functional Outcomes in PAC

15

15

PAC Outcomes Challenges

- Coding accuracy
 - Accuracy of measures
 - Gaps in coding
 - Involvement of the interdisciplinary team
- Setting variances
 - Skilled Nursing
 - Long Term Care Hospitals
 - Inpatient Rehab
 - Home Health

16

16

PT	<ul style="list-style-type: none"> • PT ---all patients will be assigned to a case mix level • 16 case mix levels based on clinical category (4) and functional level (Section GG items)

RESDAC Data

- Medicare and Medicaid data
- Research Identifiable Files (RIF)
- Standard Analytical Files (SAF)
- Medicare Provider Analysis and Review (MEDPAR)
- Much More

<https://resdac.org/>

20

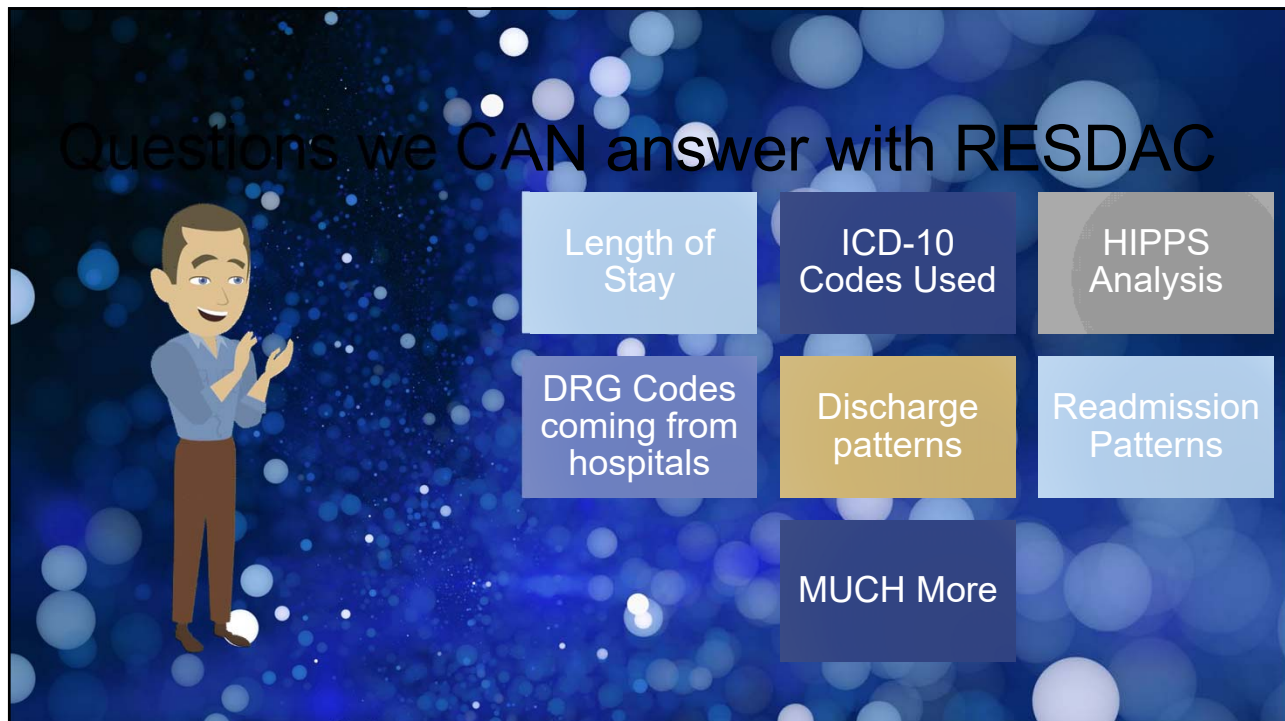

Questions we CAN'T answer with RESDAC

- How many therapy minutes are being provided under PDPM?
- Have outcomes improved or declined under PDPM?
- Anything related to PHQ-9, other than depression for clinically complex and special care. (More on this later.)
- Anything related to the BIMs
- Anything related to Managed Care

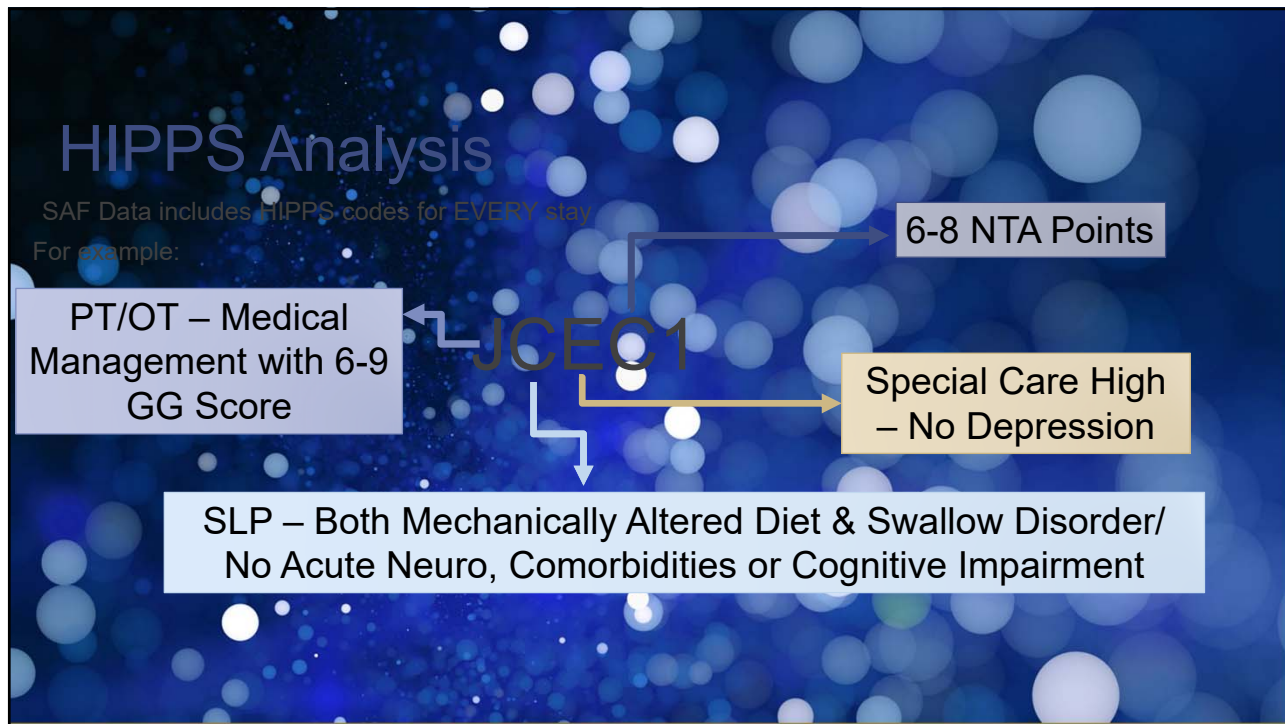

21

Questions we CAN answer with RESDAC

- Length of Stay
- ICD-10 Codes Used
- HIPPS Analysis
- DRG Codes coming from hospitals
- Discharge patterns
- Readmission Patterns
- MUCH More

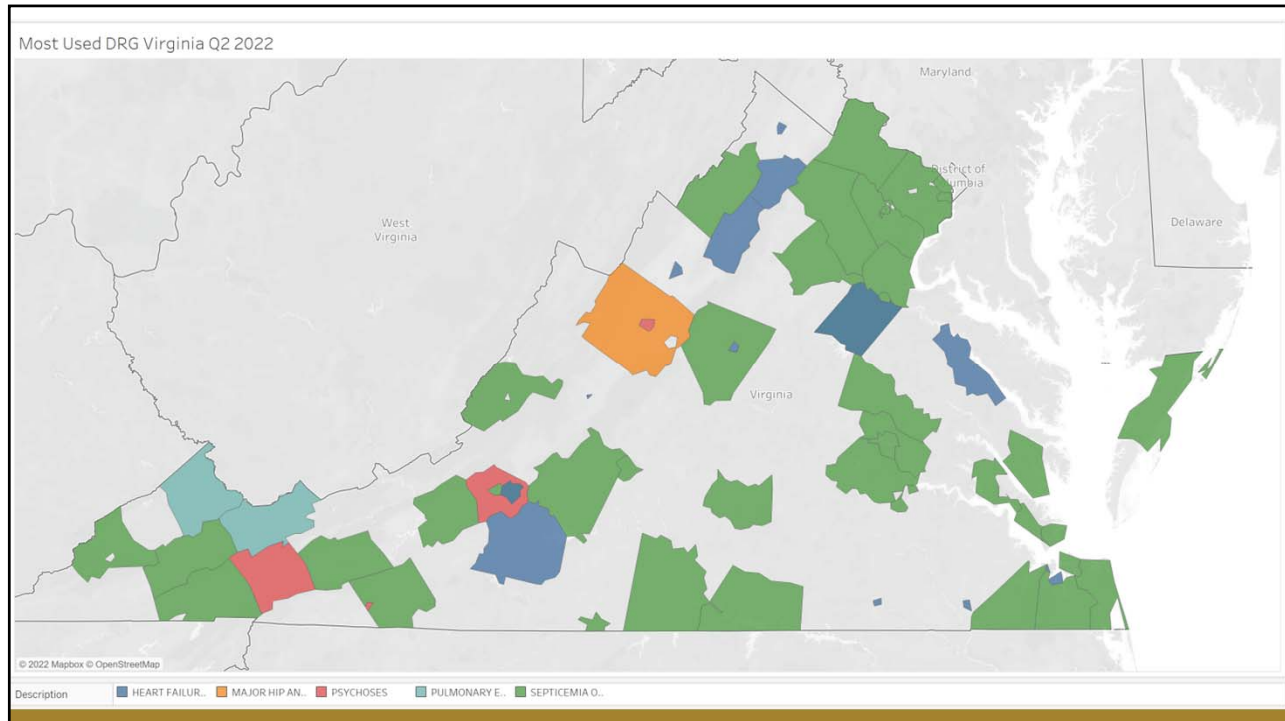

22

70

70

Strategy for Success

- How does my data compare to the state/nation/competitors?
- DIVERSITY of Coding
- Miss LESS

71

Joe's PDPM "Red Flags"

1. High Use of Nursing Category 'Reduced Physical Function'
2. High Use of NTA Category 'F'
3. Extreme Utilization of 10-23 in PT/OT
4. Very high Medical Management
5. No Evidence of SLP Programs
6. Zero Percent Depression

72

72

Strategy for Success

There are 2 sides to the ledger!

- Many focus only on reducing cost and do not question whether clinical staff are coding appropriately
- Accuracy leads to reimbursement (that includes depression)
- Are your residents lower acuity than everyone else?
- Are your coding practices different?

73

73

74

Contract Therapy

Net Change: **-\$20.78 PER DAY**

78

79

Contract versus In-House Therapy

You will need to:

- Recruit and maintain PT, OT and SLP. (PTAs and OTAs too)
 - Pay is extremely market-dependent and does NOT follow nursing trends
 - Your ratio of therapist to assistant is important
- You will need to manage *very* carefully!
- You will need to manufacture or buy your own tools.
- You will be responsible for all audit activity, including gathering data and defending yourself.
- Educate yourself and your staff. Changes Do. Not. Stop.

“Contract therapy companies make a profit. If I do what they do I can keep that profit.”

87

87

It still isn't easy

- A. It still takes a great deal of expertise to develop your own.
- B. It requires access to an enormous amount of data. (How much? MORE.)
- C. It still requires discipline to use.

88

88

Depression in the United States

What percentage of Americans are depressed?

Adults: 4.7%
(Regularly)

8.4% (Major)

89

89

Depression in Skilled Nursing

Depression in nursing homes: prevalence, recognition, and treatment

Results: 14.4% suffered acutely from major depression, 14.4% suffered from minor depression, and 18.6% were diagnosed as depressive according to the physician and nursing records. In total, 27.8% received antidepressants. Merely 42.9% of the subjects with acute major depression were diagnosed by their attending physicians as depressive, and only half of them received an antidepressant; 17.5% received antidepressants without a diagnosis of depression in their physician and nursing records. In accordance with the guidelines, 73.3% of the antidepressants prescribed were SSRIs or newer antidepressants. Only 20.0% were tricyclic antidepressants.

PubMed.gov

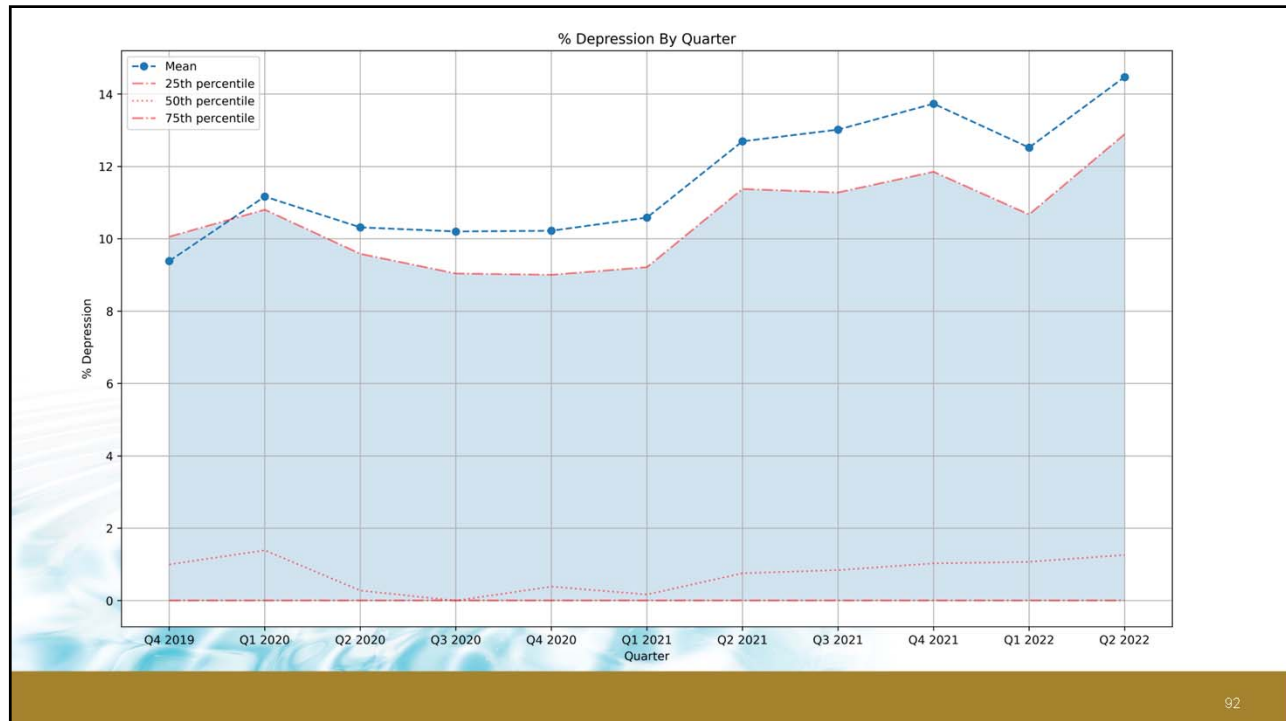

90

90

Some studies show up to **30%** depression in skilled nursing.

91

92

You have a skilled nursing facility with 15 Medicare Part A patients.

What is the probability you have ZERO depressed patients?

93

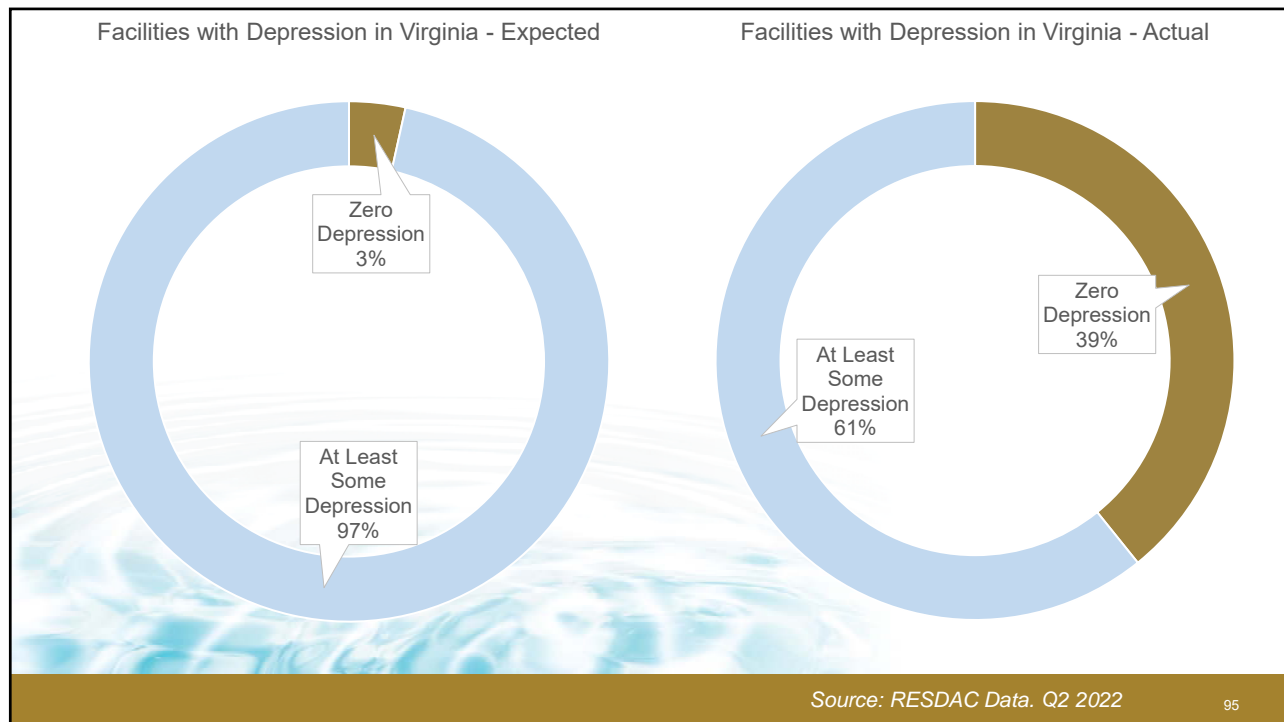

93

Probability of ZERO Depression:
 $(1 - 0.2)^{15}$

That's 3.5%
chance.

94

94

95

Reasons we don't code depression

- ❖ Empathy: We don't want someone to be depressed.
- ❖ Mental illness is not as obvious as other conditions
- ❖ Care Area Assessments (CAAs): AKA work
- ❖ Poor Training: Do staff know how to fill out the PHQ-9?
- ❖ Concern about Quality Measures

96

96

The PHQ-9[©]

D0200. Resident Mood Interview (PHQ-9e) \$\$ CATs QMs

Say to resident: "Over the last 2 weeks, have you been bothered by any of the following problems?"

If symptom is present, enter 1 (yes) in column 1, Symptom Presence.
 If yes in column 1, then ask the resident: "About how often have you been bothered by this?"
 Read and show the resident a card with the symptom frequency choices. Indicate response in column 2, Symptom Frequency.

1. Symptom Presence \$\$ CATs QMs	2. Symptom Frequency \$\$ CATs QMs	1. Symptom Presence \$\$ CATs QMs	2. Symptom Frequency \$\$ CATs QMs

Reasons we should code depression

- ❖ Compliance.
- ❖ Real empathy is recognizing someone needs help and providing it
- ❖ Also: compliance
- ❖ Increased CAAs and Quality Measures should be reflective of actual care.

PDPM Reimbursement Priority List

Default Clinical Category

- ❖ *..the applicable hospital condition need not have been the principal diagnosis that actually precipitated the beneficiary's admission to the hospital, but could be any one of the conditions present during the qualifying hospital stay ~ RAI Manual v 1.17.1 page I-1 and CMS 100-2 Chapter 8, page 8*
- ❖ Consider **EVERY** active diagnosis

Nursing Category

- ❖ *Same as above: Consider all active diagnoses*

Depression

- ❖ *Accurately fill out the PHQ-9*

PDPM Reimbursement Priority List

❑ NTAs

- ❖ Code EVERY valid NTA: Do not stop even if you don't think you'll make the next threshold. You never know what is going to happen
- ❖ You are out of compliance if you don't code an active condition
- ❖ You will treat the condition whether you code it or not. Get reimbursed!

❑ Speech

- ❖ Study the comorbidities carefully

❑ PT & OT

- ❖ If you are contract therapy, think about your contract and whether you have aligned interests

101

101

Key Points

Know your data!

- Your facility versus the state
- Your state versus the nation

Understand what's at stake

- NTA Point (~\$18.60 / point)
- Depression (~\$26.32)
- Nursing Changes (~ \$20-\$70 / day)
