

Fall Prevention Program Reboot Webinar Series

Every Wednesday from June 17 – July 22, 2026 | 2:30 – 3:30 pm

Overview

This comprehensive six-week series will provide long term care and assisted living teams with detailed fall management program components to effectively reduce fall risk, occurrences, and possible fall-related injuries. Experts from Proactive LTC Consulting will cover topics including QAPI systems to drive improved safety, keys to better fall risk assessments, insights into effective root cause analysis, intervention selection that target individual resident risk factors, developing comprehensive fall management care plans, and elevating staff engagement in fall prevention efforts.

Sessions Each webinar will be held from 2:30 – 3:30 pm.

- **June 17 | Considering All the Evidence: Assessing Fall Risk Critically:** Explore how clinical changes, medication, environment, and systems of care interact to increase fall risk, and how gaps between assessment, care planning, and implementation contribute to adverse outcomes.
- **June 24 | Getting to the “Root” of the Fall with Root Cause Analysis:** Effective fall management interventions cannot be implemented if the root cause of the fall has not been identified. This session will focus on completion of a detailed root cause analysis that will guide the facility in determining the underlying cause of falls.
- **July 1 | Addressing Fall Root Causes with Targeted Interventions:** Falls are a frequent challenge in LTC settings. This presentation focuses on moving beyond surface-level fall reviews to meaningful root cause analysis and effective resident-centered interventions.
- **July 8 | Engaging the IDT Troops in Fall Management:** This webinar will identify strategies for assigning interdisciplinary team (IDT) members’ roles/duties for fall management. Sample tools will be reviewed to assist the team members with their assigned roles, as well as insights for conducting IDT meetings for successful identification, implementation, and monitoring of fall management interventions.
- **July 15 | Care Planning Strategies for Achieving Success:** Fall management interventions cannot be effective if they are not addressed on the care plan, implemented consistently, and monitored or revised as needed. This session will focus on successful care plan strategies for fall management.
- **July 22 | QAPI Tactics for Sustaining Positive Outcomes:** This webinar examines how an effective QAPI program can be used to reduce fall risk, prevent repeat falls, and improve resident outcomes through data-driven decision making.

Who should attend?

This series is ideal for nursing leadership, administrators, department heads, owners/operators, QAPI and IDT teams, fall investigation members, therapists, restorative nurses, risk managers, and other clinical professionals who work to improve quality outcomes in LTC settings.

Presenters

- **Janine Lehman RN, RAC-CT, CLNC** | Director of Clinical and Legal Nurse Consulting | Proactive LTC Consulting
- **Liz Wheeler, BSN, RN, CHPN, IPCO, QCP, CDP** | Clinical Consultant | Proactive LTC Consulting

Continuing Education

One (1) contact hour each session; NAB approved through Proactive LTC Consulting.
